## AUDIT CERTIFICATION

The Right Metric For Sizing IT

Zhong Xu  
Huawei Technologies Co., Ltd.  
Huawei Industrial Base, Bantian,  
Longgang, Shenzhen city,  
Guangdong province, China

March 20, 2019

I verified the SPC Benchmark 1™ (SPC-1™ Revision 3.8) test execution and performance results of the following Tested Storage Product:

### HUAWEI OCEANSTOR 6800 V5

The results were:

SPC-1 IOPS™	2,700,171
SPC-1 Price-Performance™	\$481.08/SPC-1 KIOPS™
SPC-1 IOPS™ Response Time	0.579 ms
SPC-1 Overall Response Time	0.372 ms
SPC-1 ASU Capacity	61,473 GB
SPC-1 ASU Price	\$21.14/GB
SPC-1 Total System Price	\$1,298,993.24

In my opinion, these performance results were produced in compliance with the SPC requirements for the benchmark.

The testing was executed using the SPC-1 Toolkit Version 3.0.2-1 build g823a. The audit process was conducted in accordance with the SPC Policies and met the requirements for the benchmark.

A Letter of Good Faith was issued by the Test Sponsor, stating the accuracy and completeness of the documentation and testing data provided in support of the audit of this result.

A Full Disclosure Report for this result was prepared by InfoSizing, reviewed and approved by the Test Sponsor, and can be found at [www.spcresults.org](http://www.spcresults.org) under the Submission Identifier A31021.

20 KREG LANE • MANITOUE SPRINGS, CO 80829 • 719-473-7555 • [WWW.SIZING.COM](http://WWW.SIZING.COM)

A31021

HUAWEI OCEANSTOR 6800 V5

p.2

The independent audit process conducted by InfoSizing included the verifications of the following items:

- The physical capacity of the data repository;
- The total capacity of the Application Storage Unit (ASU);
- The accuracy of the Benchmark Configuration diagram;
- The tuning parameters used to configure the Benchmark Configuration;
- The Workload Generator commands used to execute the testing;
- The validity and integrity of the test result files;
- The compliance of the results from each performance test;
- The compliance of the results from the persistence test;
- The compliance of the submitted pricing model; and
- The differences between the tested and the priced configuration, if any.

The Full Disclosure Report for this result was prepared in accordance with the disclosure requirements set forth in the specification for the benchmark.

The following benchmark requirements, if any, were waived according to the SPC Policies:

- None.

Respectfully Yours,

François Raab, Certified SPC Auditor

InfoSizing  
20 Kreg Lane  
Manitou Springs, CO 80829

Subject: SPC-1 Letter of Good Faith for the Huawei OceanStor 6800V5

Huawei Technologies Co., Ltd. is the SPC-1 Test Sponsor for the above listed product. To the best of our knowledge and belief, the required SPC-1 benchmark results and materials we have submitted for that product are complete, accurate, and in full compliance with V3.8 of the SPC-1 benchmark specification.

In addition, we have reported any items in the Benchmark Configuration and execution of the benchmark that affected the reported results even if the items are not explicitly required to be disclosed by the SPC-1 benchmark specification.

## Benchmark Configuration Diagram

## Tested Storage Product Description

The new generation of mid-range hybrid flash storage, dedicated to providing the reliable and efficient data services for enterprises.

Cloud-ready operating system, flash-enabled performance, and intelligent management software, delivering top-of-the-line functionality, performance, efficiency, reliability, and ease of use.

Satisfies the data storage requirements of large-database OLTP/OLAP, cloud computing, and many other applications, making it a perfect choice for sectors such as government, finance, telecommunications, and manufacturing.

**Third-Party Reseller:** Huawei Technologies Co., Ltd. only sells its products to third-party resellers who, in turn, sell those products to U.S. customers. The above reflects the pricing quoted by one of those third-party resellers. See Appendix B of the Full Disclosure Report for a copy of the third-party reseller's quotation.

**Discount Details:** The discounts shown are based on the storage capacity purchased and are generally available.

**Warranty:** Hi-Care Premier On-Site Service include: 7x24 Technical Assistance Center Access. Access to all new software updates and Online Support. 24x7 with 4-hour On-site Hardware Replacement.

**Availability Date:** Currently available.

## CONFIGURATION INFORMATION

### Benchmark Configuration and Tested Storage Configuration

The following diagram illustrates the Benchmark Configuration (BC), including the Tested Storage Configuration (TSC) and the Host System(s).

## **Storage Network Configuration**

The Tested Storage Configuration (TSC) involved an external storage subsystem made of 8 Huawei OceanStor 6800 V5 Controllers, driven by 11 host systems (Huawei FusionServer RH2288H V3). The OceanStor Controllers were grouped in sets of 4 in 2 System Enclosures, forming 2 OceanStor Engines. Each FusionServer host system connected one-to-one to each OceanStor Controllers. That connection was established via a port from 1 of the 4 dual-port Fibre Chanel HBAs on the FusionServer; and a port from 1 of the 3 4-port Smart I/O Modules on the OceanStor Controllers, leaving 1 of these ports inactive in each Controller. These Fibre Chanel paths operated at 8Gbps.

## **Host System and Tested Storage Configuration Components**

The following table lists the components of the Host System(s) and the Tested Storage Configuration (TSC).

Host Systems
11 x Huawei FusionServer™ RH2288H V3 2 x Intel® Xeon® E5-2680 v3 (2.7 GHz, 8 Cores, 20 MB L3) 128 GB Main Memory Red Hat Enterprise Linux 7.1
Priced Storage Configuration
44 x QLogic dual-ported QLE2562 FC HBA
2 x System enclosures, each with: 4 x OceanStor 6800 V5 Active-Active Controllers (8 total), each with: 512 GB cache (4,096 GB total) 3 x 4-port 8Gbps Smart I/O Modules (24 total) 1 x 4-port 10GE Smart I/O Modules (8 total) 2 x 12-port 12Gbps SAS I/O Modules (4 total) 14 x 2U Disk enclosures, each with: 12 x 960 GB SSDs (168 total) 2 x 48-port 10GE Switches

## **Differences Between Tested and Priced Storage Configurations**

There were no differences between the Tested Storage Configuration and the Priced Storage Configuration.

## **Component Changes in Revised Full Disclosure Report**

The following table outlines component changes that were made in revisions to this Full Disclosure Report.

Original Component	Revised Component	Description of Change
n/a	n/a	Initial submission

## Benchmark Configuration Creation Process

### Customer Tuning Parameters and Options

All the customer tuning parameters and options that have been altered from their default values for this benchmark are included in Appendix C and in the Supporting Files (see Appendix A).

### Tested Storage Configuration Creation

A detailed description of how the logical representation of the TSC was created is included in Appendix D and in the Supporting Files (see Appendix A).

### Tested Storage Configuration Inventory

An inventory of the components in the TSC, as seen by the Benchmark Configuration, is included in Appendix E and in the Supporting Files (see Appendix A).

### Workload Generator Storage Configuration

The SPC-1 Workload Generator storage configuration commands and parameters used to invoke the execution of the tests are included in Appendix F and in the Supporting Files (see Appendix A).

### Logical Volume Capacity and ASU Mapping

The following table details the capacity of each ASU and how they are mapped to logical volumes (LV).

	LV per ASU	LV Capacity	Used per LV	Total per ASU	% ASU Capacity
<b>ASU-1</b>	18	1,536.9	1,536.8	27,662.9	45.00%
<b>ASU-2</b>	18	1,536.9	1,536.8	27,662.9	45.00%
<b>ASU-3</b>	2	3,073.5	3,073.4	6,146.8	10.00%
<b>SPC-1 ASU Capacity</b>				<b>61,472.6</b>	

### Physical Storage Capacity and Utilization

The following table details the Physical Capacity of the storage devices and the Physical Capacity Utilization (percentage of Total Physical Capacity used) in support of hosting the ASUs.

Devices	Count	Physical Capacity	Total Capacity
960GB SSD	168	960.0	161,280.0
<b>Total Physical Capacity</b>			<b>161,280.0</b>
<b>Physical Capacity Utilization</b>			<b>38.11%</b>

### Data Protection

The data protection level used for all logical volumes was **Protected 2**, which was accomplished by configuring 14 pools of 12 drives into 14 RAID-10 arrays and providing redundancy for all TSC components.

## **BENCHMARK EXECUTION RESULTS**

This portion of the Full Disclosure Report documents the results of the various SPC-1 Tests, Test Phases, and Test Runs.

### **Benchmark Execution Overview**

#### **Workload Generator Input Parameters**

The SPC-1 Workload Generator commands and input parameters for the Test Phases are presented in the Supporting Files (see Appendix A).

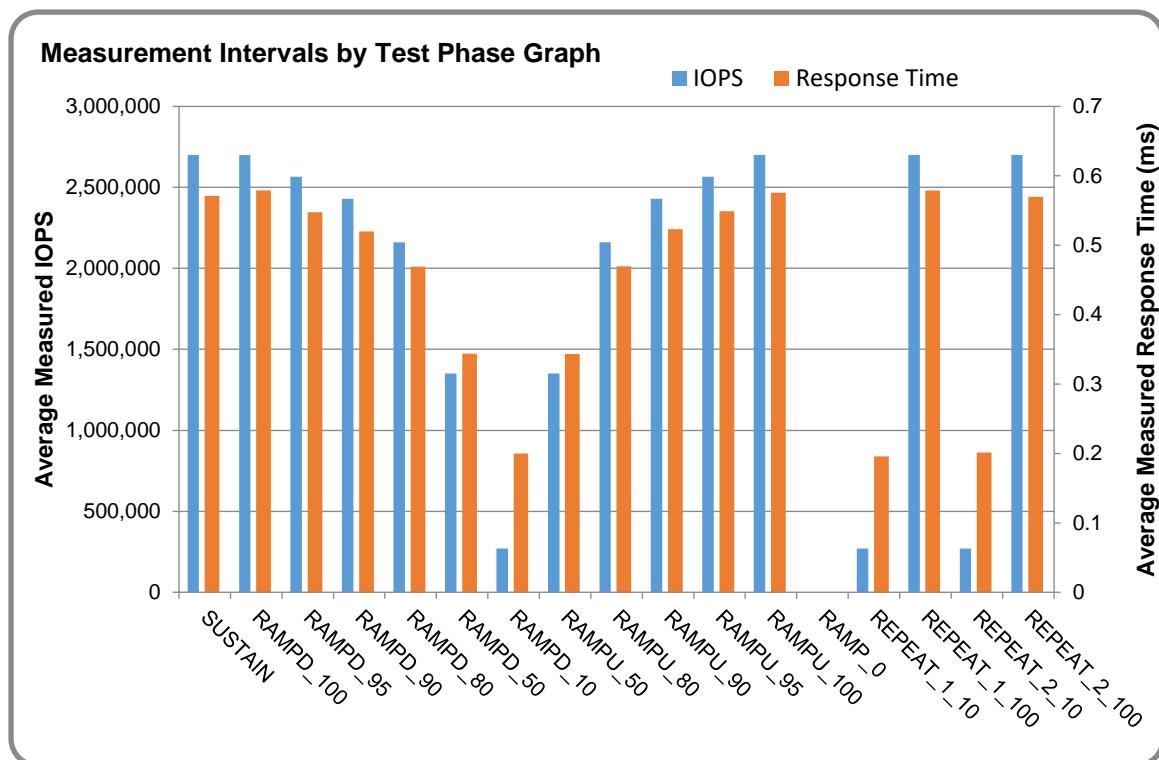

#### **Primary Metrics Test Phases**

The benchmark execution consists of the Primary Metrics Test Phases, including the Test Phases SUSTAIN, RAMPD\_100 to RAMPD\_10, RAMPU\_50 to RAMPU\_100, RAMP\_0, REPEAT\_1 and REPEAT\_2.

Each Test Phase starts with a transition period followed by a Measurement Interval.

#### **Measurement Intervals by Test Phase Graph**

The following graph presents the average IOPS and the average Response Times measured over the Measurement Interval (MI) of each Test Phase.

#### **Exception and Waiver**

None.

## SUSTAIN Test Phase

### SUSTAIN – Results File

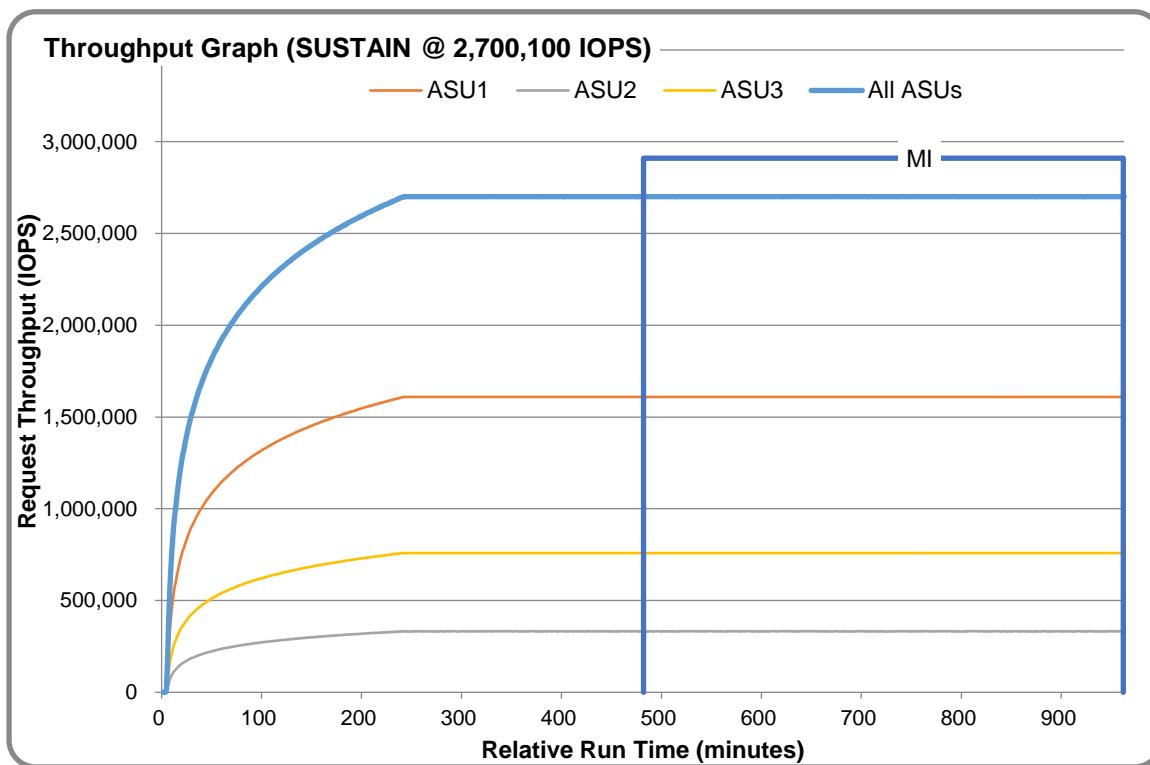

The results file generated during the execution of the SUSTAIN Test Phase is included in the Supporting Files (see Appendix A) as follows:

- **SPC1\_METRICS\_0\_Raw\_Results.xlsx**

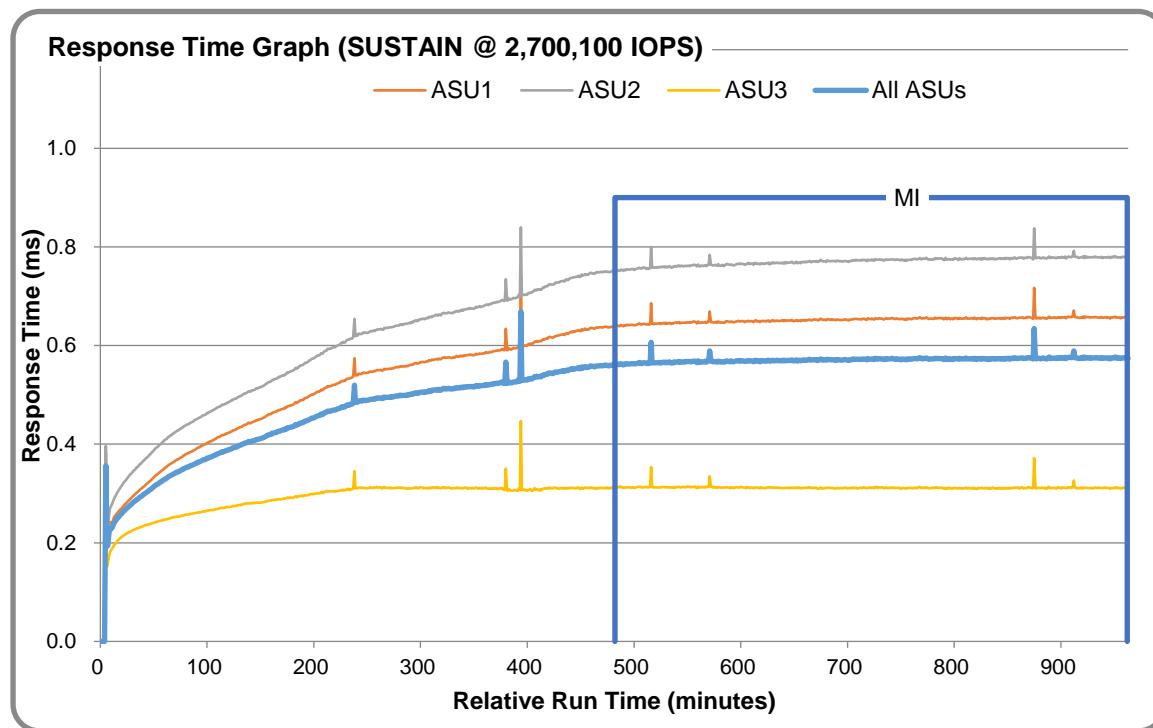

### SUSTAIN – Execution Times

Interval	Start Time	End Time	Duration
Transition Period	12-Mar-19 17:44:24	13-Mar-19 01:44:24	8:00:00
Measurement Interval	13-Mar-19 01:44:24	13-Mar-19 09:44:25	8:00:01

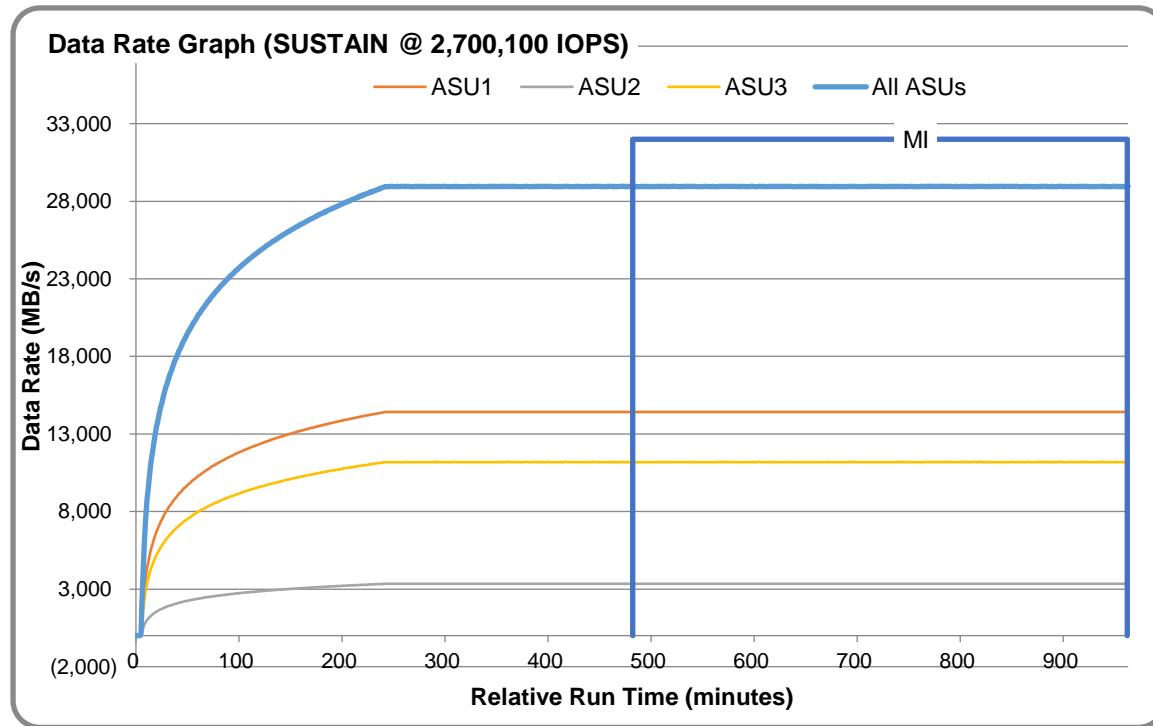

### SUSTAIN – Throughput Graph

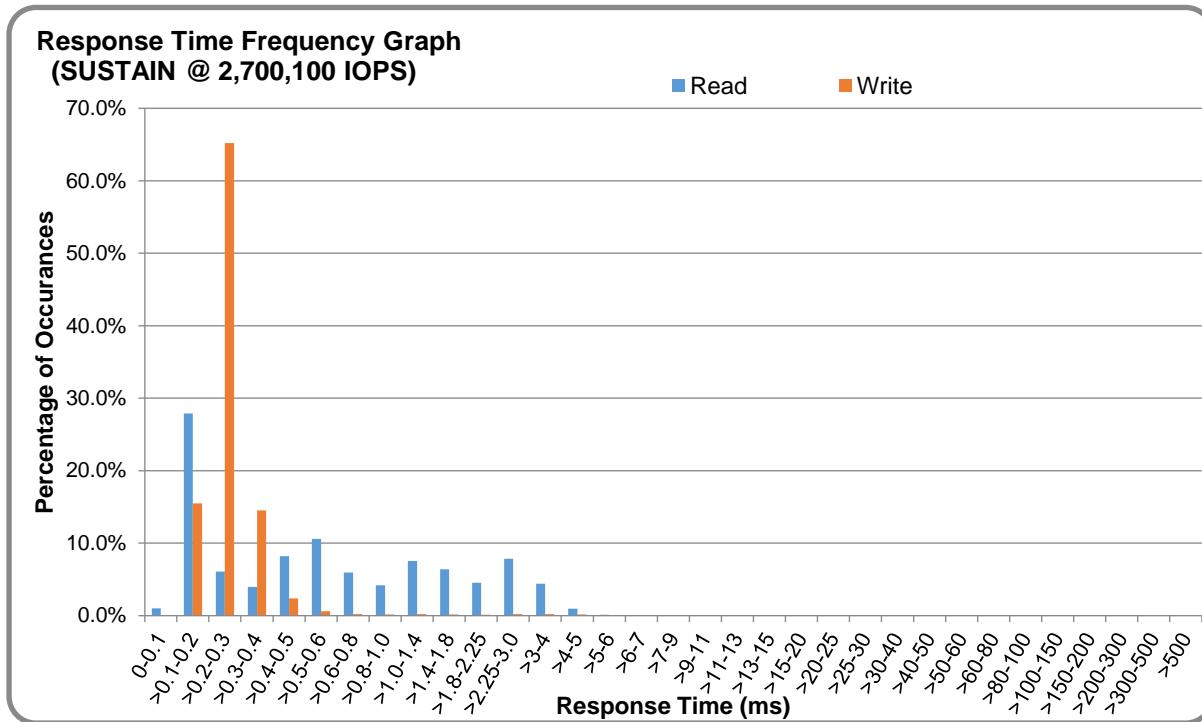

### SUSTAIN – Response Time Graph

### SUSTAIN – Data Rate Graph

## SUSTAIN – Response Time Frequency Graph

## SUSTAIN – Intensity Multiplier

The following table lists the targeted intensity multiplier (Defined), the measured intensity multiplier (Measured) for each I/O STREAM, its coefficient of variation (Variation) and the percentage of difference (Difference) between Target and Measured.

	ASU1-1	ASU1-2	ASU1-3	ASU1-4	ASU2-1	ASU2-2	ASU2-3	ASU3-1
<b>Defined</b>	0.0350	0.2810	0.0700	0.2100	0.0180	0.0700	0.0350	0.2810
<b>Measured</b>	0.0350	0.2810	0.0700	0.2100	0.0180	0.0700	0.0350	0.2810
<b>Variation</b>	0.0004	0.0001	0.0003	0.0002	0.0006	0.0003	0.0004	0.0001
<b>Difference</b>	0.004%	0.001%	0.005%	0.000%	0.007%	0.003%	0.005%	0.003%

## RAMPD\_100 Test Phase

### RAMPD 100 – Results File

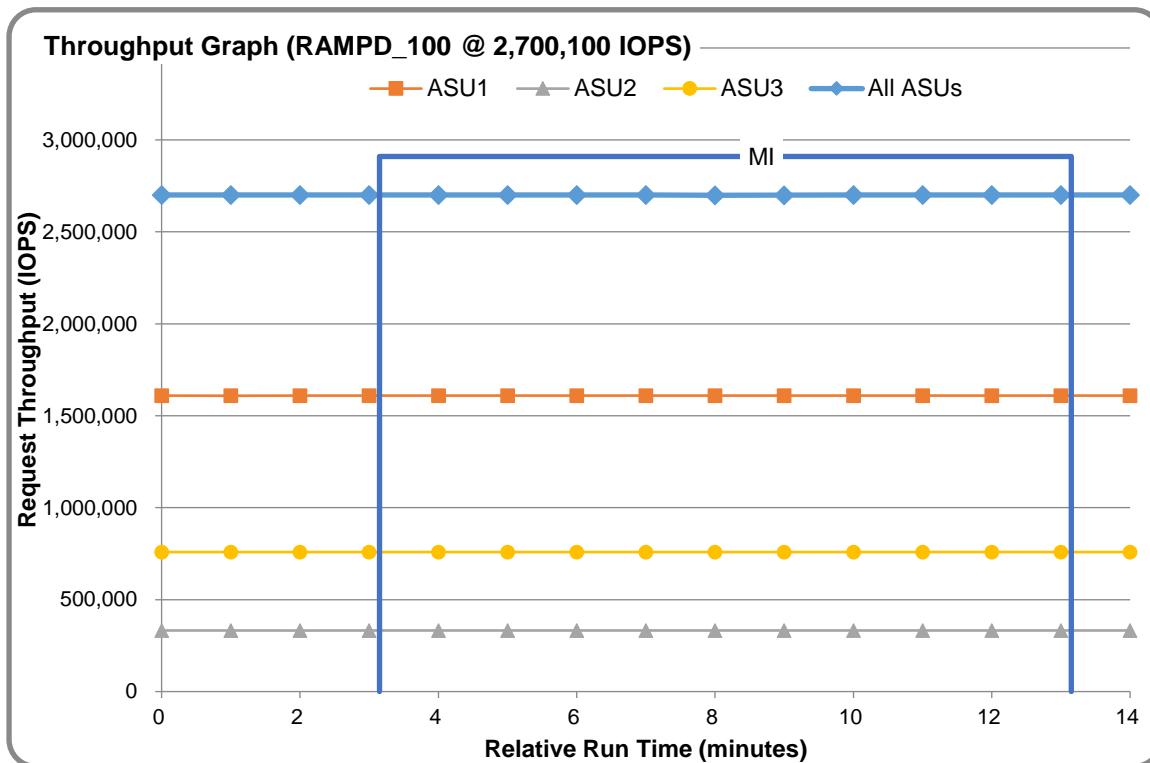

The results file generated during the execution of the RAMPD\_100 Test Phase is included in the Supporting Files (see Appendix A) as follows:

- **SPC1\_METRICS\_0\_Raw\_Results.xlsx**

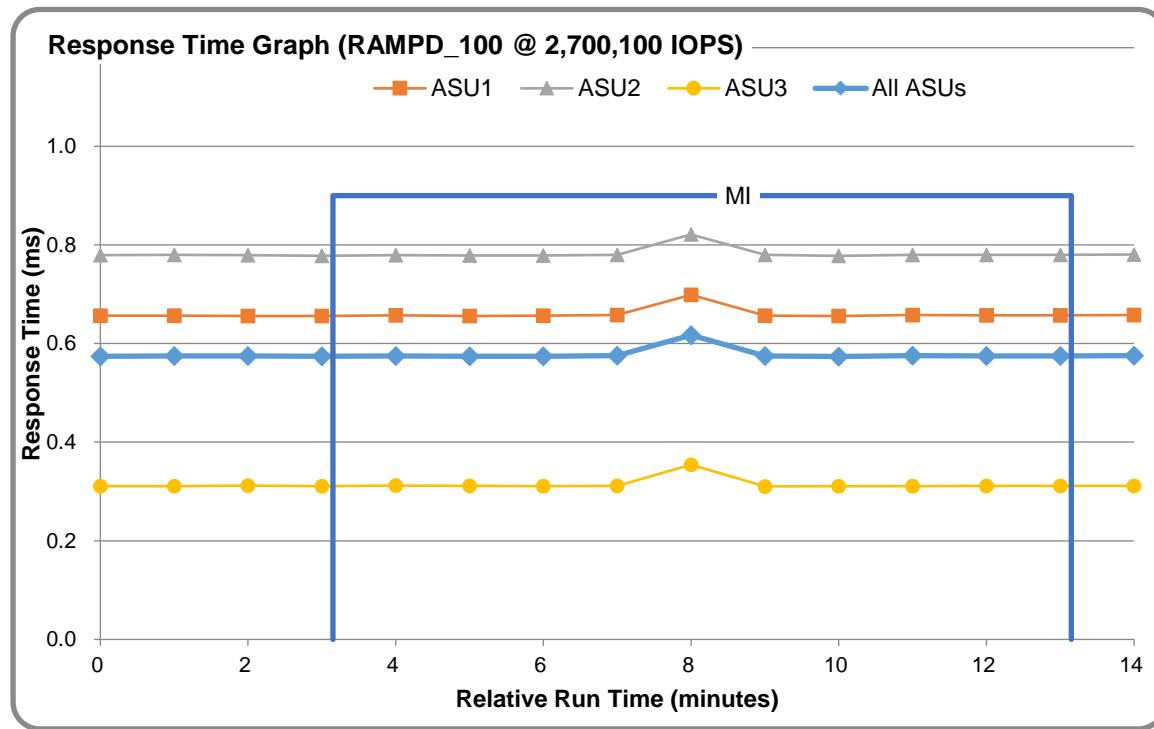

### RAMPD 100 – Execution Times

Interval	Start Time	End Time	Duration
Transition Period	13-Mar-19 09:45:24	13-Mar-19 09:48:24	0:03:00
Measurement Interval	13-Mar-19 09:48:24	13-Mar-19 09:58:25	0:10:01

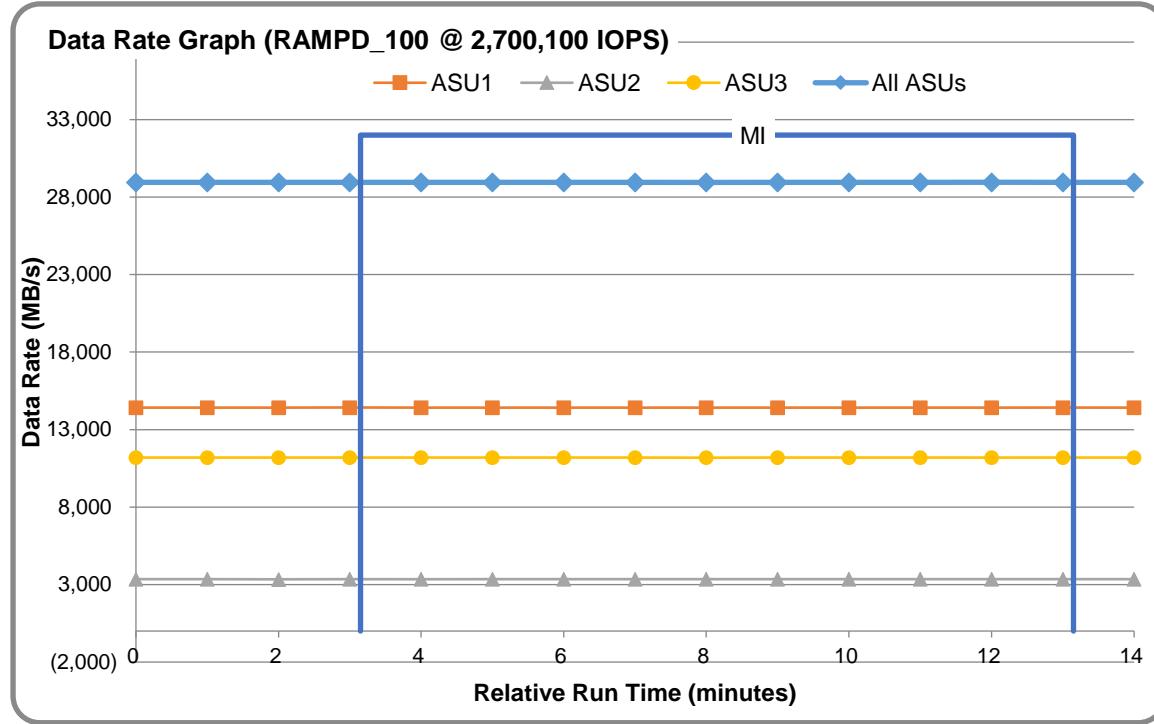

### RAMPD 100 – Throughput Graph

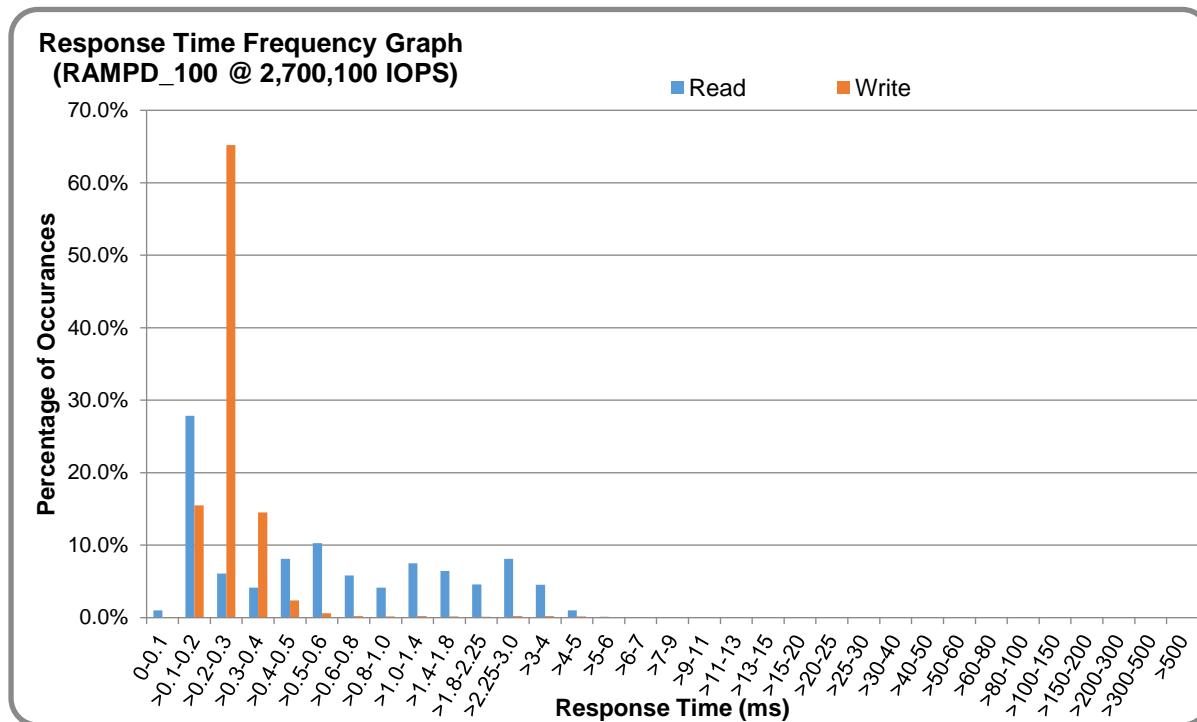

### RAMPD 100 – Response Time Graph

### RAMPD 100 – Data Rate Graph

## RAMPD 100 – Response Time Frequency Graph

## RAMPD 100 – Intensity Multiplier

The following table lists the targeted intensity multiplier (Defined), the measured intensity multiplier (Measured) for each I/O STREAM, its coefficient of variation (Variation) and the percentage of difference (Difference) between Target and Measured.

	ASU1-1	ASU1-2	ASU1-3	ASU1-4	ASU2-1	ASU2-2	ASU2-3	ASU3-1
<b>Defined</b>	0.0350	0.2810	0.0700	0.2100	0.0180	0.0700	0.0350	0.2810
<b>Measured</b>	0.0350	0.2810	0.0700	0.2100	0.0180	0.0700	0.0350	0.2810
<b>Variation</b>	0.0004	0.0001	0.0003	0.0001	0.0008	0.0002	0.0003	0.0001
<b>Difference</b>	0.007%	0.005%	0.007%	0.005%	0.006%	0.015%	0.002%	0.008%

## RAMPD 100 – I/O Request Summary

I/O Requests Completed in the Measurement Interval	1,620,135,322
I/O Requests Completed with Response Time <= 30 ms	1,620,075,696
I/O Requests Completed with Response Time > 30 ms	59,626

## Response Time Ramp Test

### Response Time Ramp Test – Results File

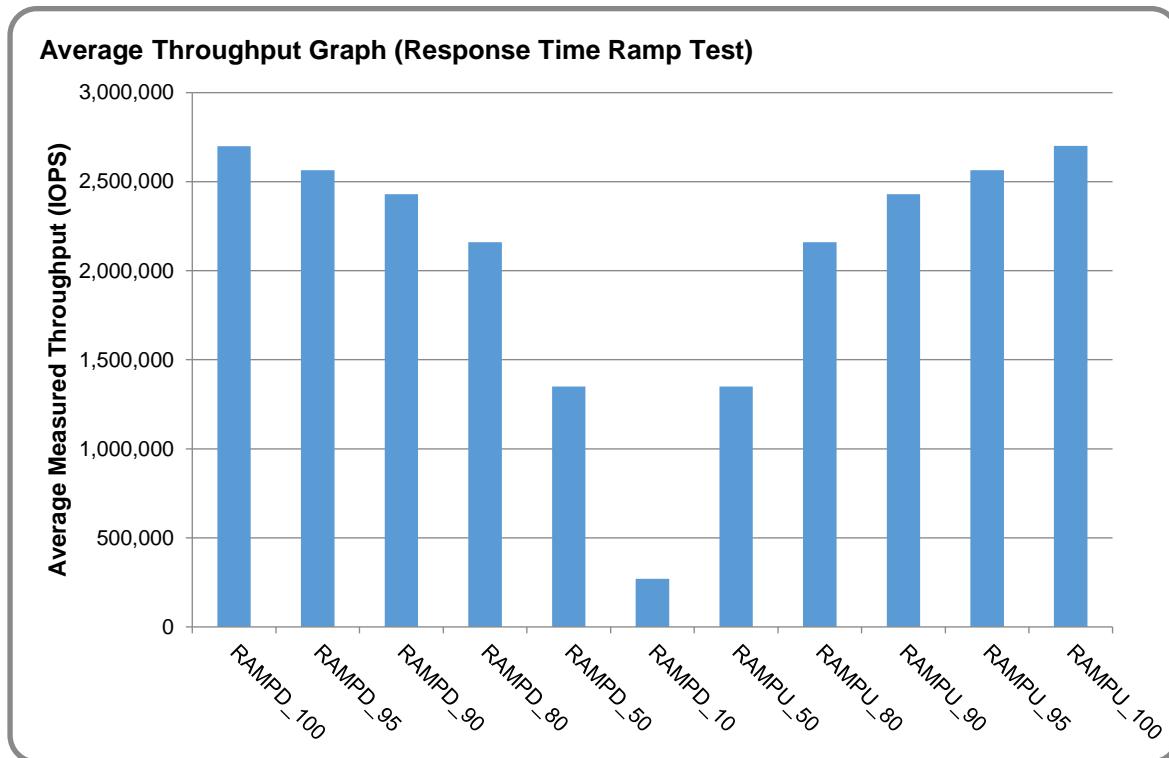

The results file generated during the execution of the Response Time Ramp Test is included in the Supporting Files (see Appendix A) as follows:

- **SPC1\_METRICS\_0\_Raw\_Results.xlsx**

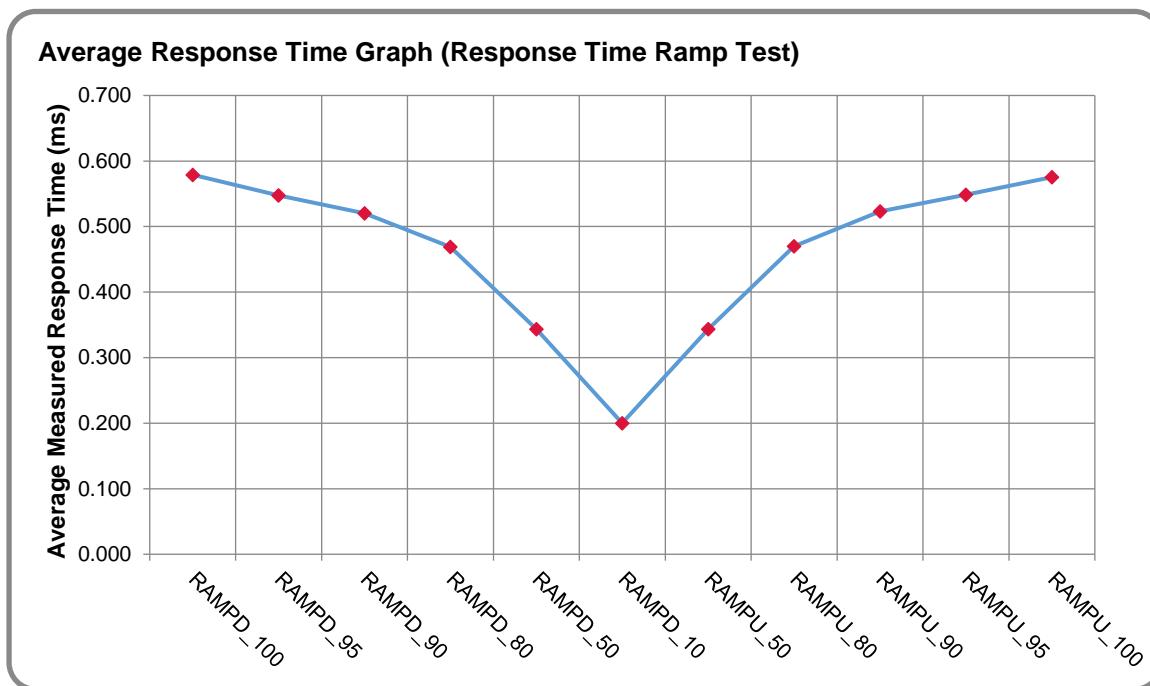

### Response Time Ramp Test – Phases

The Response Time Ramp Test is comprised of 11 Test Phases, including six Ramp-Down Phases (executed at 100%, 95%, 90%, 80%, 50%, and 10% of the Business Scaling Unit) and five Ramp-Up Phases (executed at 50%, 80%, 90%, 95%, and 100% of the Business Scaling Unit).

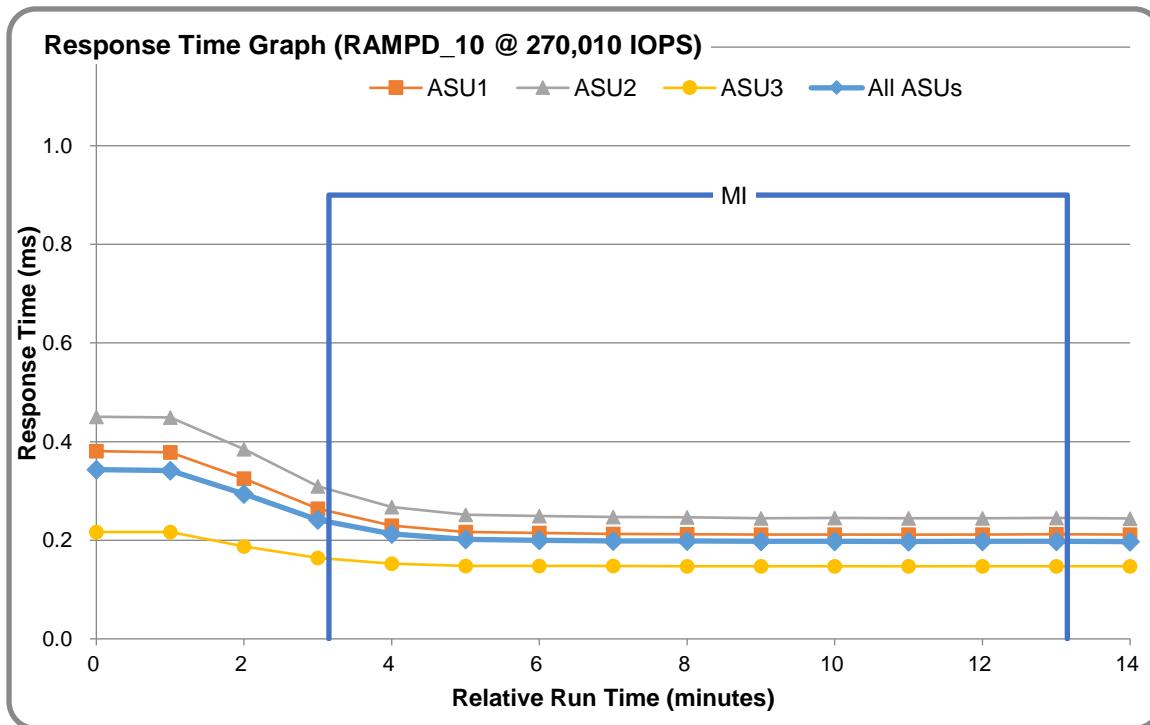

### Response Time Ramp Test – Average Throughput Graph

### Response Time Ramp Test – Average Response Time Graph

### Response Time Ramp Test – RAMPD\_10 Response Time Graph

## Repeatability Test

### Repeatability Test Results File

The results file generated during the execution of the Repeatability Test is included in the Supporting Files (see Appendix A) as follows:

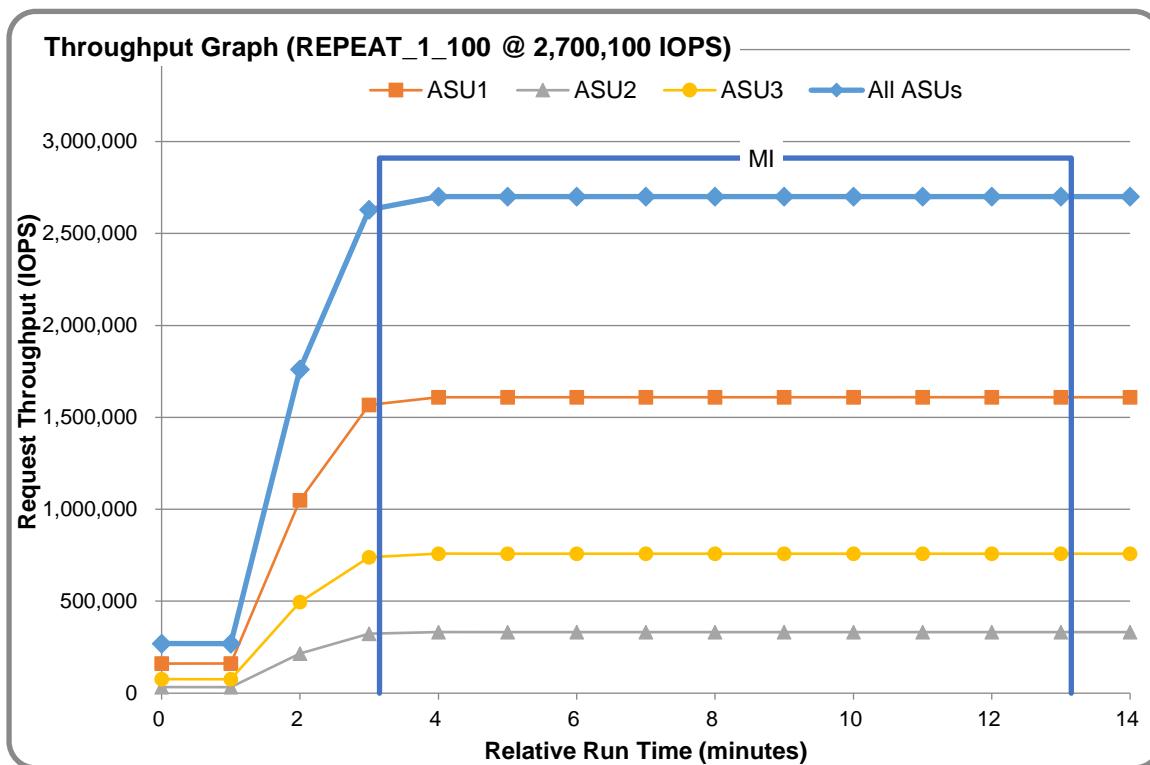

- **SPC1\_METRICS\_0\_Raw\_Results.xlsx**

### Repeatability Test Results

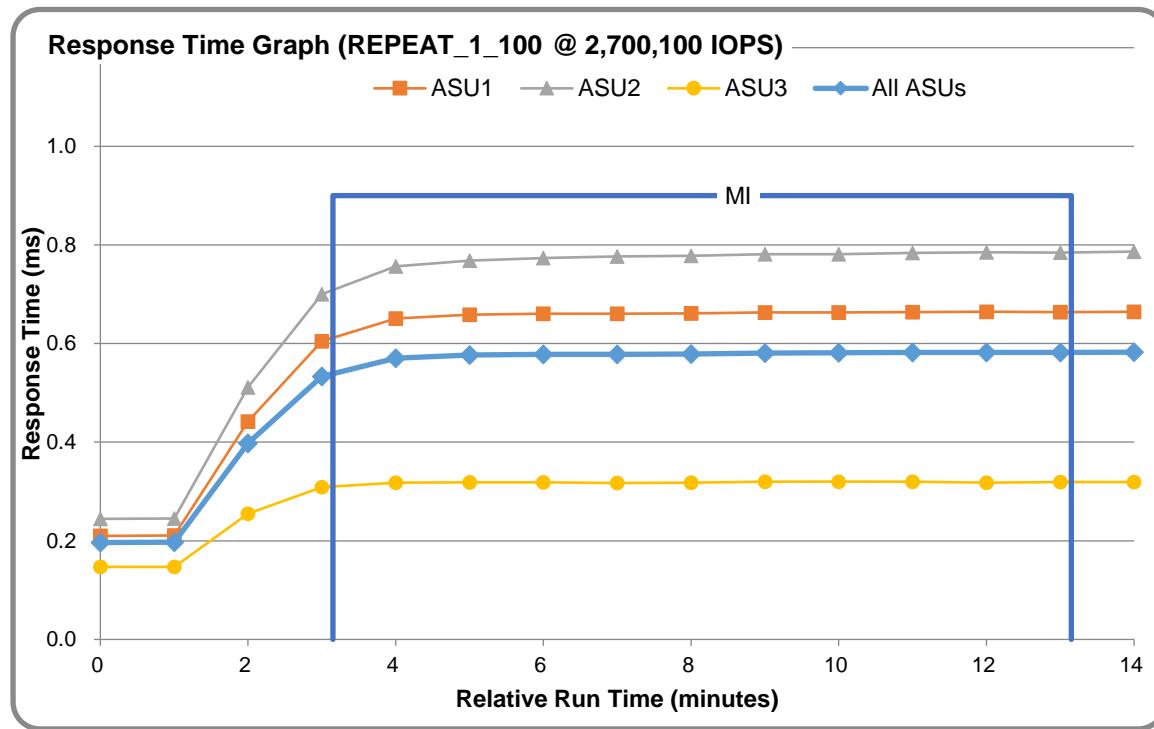

The throughput measurements for the Response Time Ramp Test (RAMPD) and the Repeatability Test Phases (REPEAT\_1 and REPEAT\_2) are listed in the tables below.

Test Phase	100% IOPS	10% IOPS
RAMPD	2,700,171.5	270,028.9
REPEAT_1	2,700,215.7	270,040.5
REPEAT_2	2,700,329.8	270,000.8

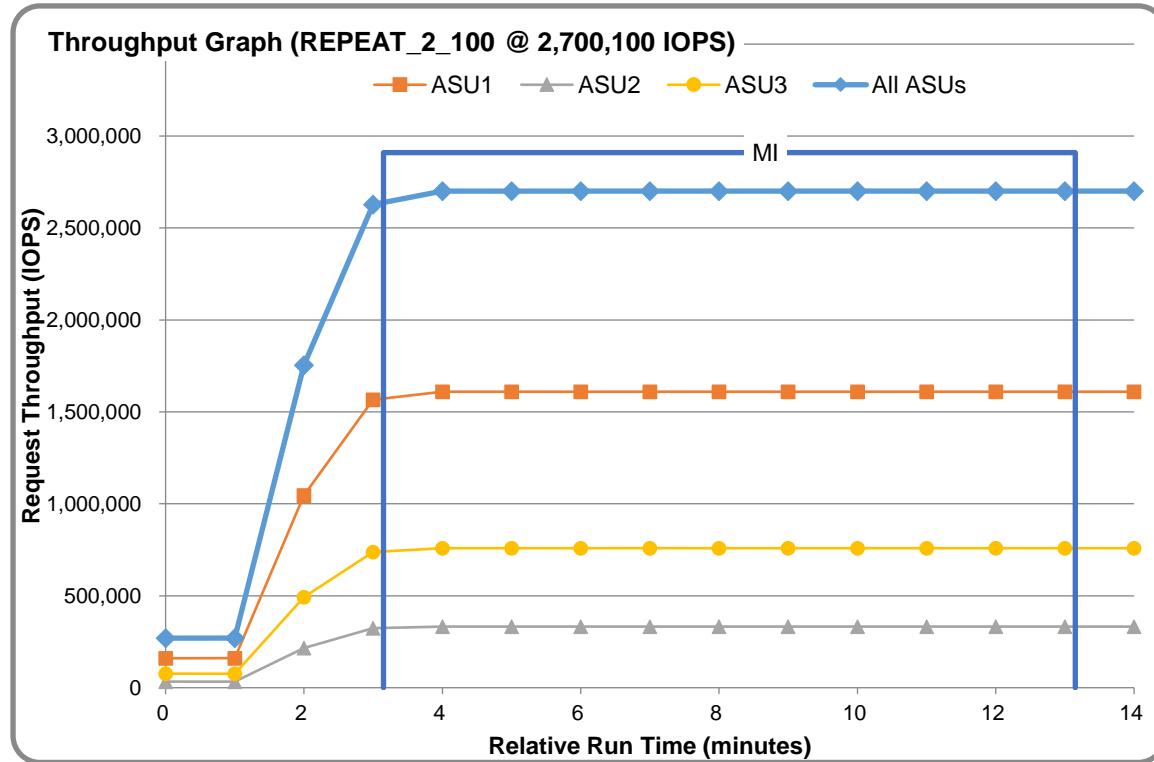

### REPEAT\_1\_100 – Throughput Graph

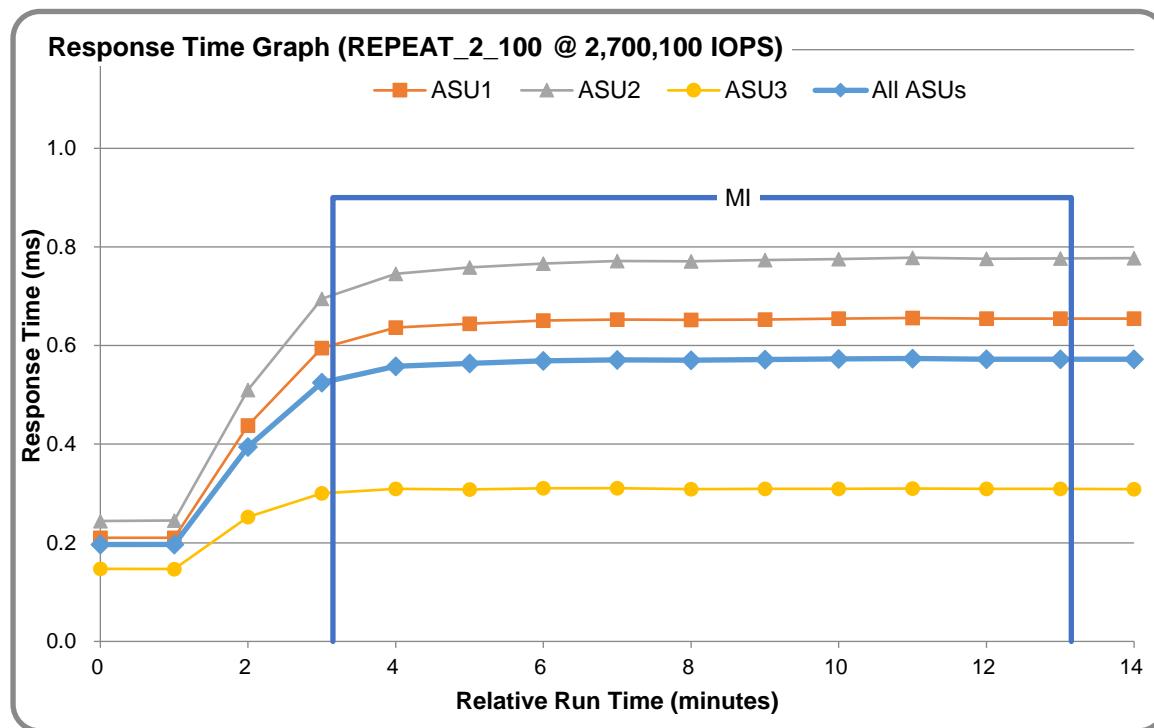

### REPEAT 1 100 – Response Time Graph

### REPEAT 2 100 – Throughput Graph

## REPEAT\_2\_100 – Response Time Graph

## Repeatability Test – Intensity Multiplier

The following tables lists the targeted intensity multiplier (Defined), the measured intensity multiplier (Measured) for each I/O STREAM, its coefficient of variation (Variation) and the percent of difference (Difference) between Target and Measured.

### REPEAT\_1\_100 Test Phase

	ASU1-1	ASU1-2	ASU1-3	ASU1-4	ASU2-1	ASU2-2	ASU2-3	ASU3-1
<b>Defined</b>	0.0350	0.2810	0.0700	0.2100	0.0180	0.0700	0.0350	0.2810
<b>Measured</b>	0.0350	0.2810	0.0700	0.2100	0.0180	0.0700	0.0350	0.2810
<b>Variation</b>	0.0004	0.0002	0.0004	0.0002	0.0007	0.0002	0.0005	0.0001
<b>Difference</b>	0.027%	0.003%	0.004%	0.001%	0.024%	0.011%	0.018%	0.003%

### REPEAT\_2\_100 Test Phase

	ASU1-1	ASU1-2	ASU1-3	ASU1-4	ASU2-1	ASU2-2	ASU2-3	ASU3-1

## Space Optimization Reporting

### Description of Utilized Techniques

No space optimization was used for this SPC-1 result.

### Physical Free Space Measurements

The following table lists the Physical Free Space as measured at each of the required points during test execution. If space optimization techniques were not used, “NA” is reported.

Physical Free Space Measurement	Free Space (GB)
After Logical Volume Creation	NA
After ASU Pre-Fill	NA
After Repeatability Test Phase	NA

### Space Optimization Metrics

The following table lists the required space optimization metrics. If space optimization techniques were not used, “NA” is reported.

Space Optimization Metric	Value
SPC-1 Space Optimization Ratio	NA
SPC-1 Space Effectiveness Ratio	NA

## Data Persistence Test

### Data Persistence Test Results file

The results files generated during the execution of the Data Persistence Test is included in the Supporting Files (see Appendix A) as follows:

- **SPC1\_PERSIST\_1\_0\_Raw\_Results.xlsx**
- **SPC1\_PERSIST\_2\_0\_Raw\_Results.xlsx**

### Data Persistence Test Execution

The Data Persistence Test was executed using the following sequence of steps:

- The PERSIST\_1\_0 Test Phase was executed to completion.
- The Benchmark Configuration was taken through an orderly shutdown process and powered off.
- The Benchmark Configuration was powered on and taken through an orderly startup process.
- The PERSIST\_2\_0 Test Phase was executed to completion.

### Data Persistence Test Results

Data Persistence Test Phase: Persist1	
Total Number of Logical Blocks Written	554,824,409
Total Number of Logical Blocks Verified	267,809,907
Total Number of Logical Blocks Overwritten	287,014,502
Total Number of Logical Blocks that Failed Verification	0
Time Duration for Writing Test Logical Blocks (sec.)	601
Size in bytes of each Logical Block	8,192
Number of Failed I/O Requests in the process of the Test	0

### Committed Data Persistence Implementation

The persistency of committed data is implemented at two levels. At the disk level, data loss is prevented through the use of RAID 10 arrays. At the controller level, all caches are mirrored across controllers, where write requests are only completed once the local cache has been successfully mirrored in another controller's cache. In addition, cache content is protected from a loss of power by flushing the cache content to permanent flash memory, as soon as a power loss is detected. The flushing action is powered by a battery backup located in each controller.

## **APPENDIX A: SUPPORTING FILES**

The following table details the content of the Supporting Files provided as part of this Full Disclosure Report.

<b>File Name</b>	<b>Description</b>	<b>Location</b>
<b>/SPC1_RESULTS</b>	<b>Data reduction worksheets</b>	<b>root</b>
SPC1_INIT_0_Raw_Results.xlsx	Raw results for INIT Test Phase	/SPC1_RESULTS
SPC1_METRICS_0_Quick_Look.xlsx	Quick Look Test Run Overview	/SPC1_RESULTS
SPC1_METRICS_0_Raw_Results.xlsx	Raw results for Primary Metrics Test	/SPC1_RESULTS
SPC1_METRICS_0_Summary_Results.xlsx	Primary Metrics Summary	/SPC1_RESULTS
SPC1_PERSIST_1_0_Raw_Results.xlsx	Raw results for PERSIST1 Test Phase	/SPC1_RESULTS
SPC1_PERSIST_2_0_Raw_Results.xlsx	Raw results for PERSIST2 Test Phase	/SPC1_RESULTS
SPC1_Run_Set_Overview.xlsx	Run Set Overview Worksheet	/SPC1_RESULTS
SPC1_VERIFY_0_Raw_Results.xlsx	Raw results for first VERIFY Test Phase	/SPC1_RESULTS
SPC1_VERIFY_1_Raw_Results.xlsx	Raw results for second VERIFY Test Phase	/SPC1_RESULTS
<b>/C_Tuning</b>	<b>Tuning parameters and options</b>	<b>root</b>
aio-max-nr.sh	Set maximum asynchronous I/O	/C_Tuning
nr_requests.sh	Increase disk queue depth	/C_Tuning
scheduler.sh	Change the I/O scheduler	/C_Tuning
<b>/D_Creation</b>	<b>Storage configuration creation</b>	<b>root</b>
mklun.txt	Create the storage environment	/D_Creation
mkvolume.sh	Create the Logical Volumes	/D_Creation
<b>/E_Inventory</b>	<b>Configuration inventory</b>	<b>root</b>
profile1_volume.log	List of logical volumes before INIT	/E_Inventory
profile1_storage.log	List of storage devices before INIT	/E_Inventory
profile2_volume.log	List of logical volumes after restart	/E_Inventory
profile2_storage.log	List of storage devices after restart	/E_Inventory
<b>/F_Generator</b>	<b>Workload generator</b>	<b>root</b>
slave_asu.asu	Defining LUNs hosting the ASUs	/F_generator
11host.HST	Host configuration file	/F_generator
full_run.sh	Executing all test phases	/F_generator

Payment Terms:						
Comments:						
Noviant is an Authorized Value Added reseller (VAR) of networking products. Products sold by NF are factory new unless otherwise specified. All new products sold by NF carry its own Original Equipment Manufacturer's (OEM) Limited Warranty and software licenses. This Quote is valid for 90 days. Prices and availability is subject to change without notice. Installation and configuration costs are not included in the quoted pricing unless specified. A 20% Restocking Fee applies to all cancelled orders and/or returned products. Special Orders are non-returnable. Buyer is responsible for payment of all applicable taxes and freight charges. Issuance of customer PO against this Quote constitutes acceptance of Noviant Sales Terms conditions.						
I agree to the these terms and conditions.						

## **APPENDIX C: TUNING PARAMETERS AND OPTIONS**

The following scripts, listed below, were used to set tuning parameters and options:

- ***aio-max-nr.sh*** to change the maximum number of AIO operations to 1048576
- ***nr\_requests.sh*** to change nr\_requests from 128 to 4096 on each Host System for each device
- ***scheduler.sh*** to change the I/O scheduler from cfq to noop on each Host System, which will result in all incoming I/O requests inserted into a simple, unordered FIFO queue

The scripts described above are included in the Supporting Files (see Appendix A) and listed below.

### ***aio-max-nr.sh***

```
echo 10485760 > /proc/sys/fs/aio-max-nr
```

### ***nr\_requests.sh***

```
echo 4096 >/sys/block/sdb/queue/nr_requests
echo 4096 >/sys/block/sdc/queue/nr_requests
echo 4096 >/sys/block/sdd/queue/nr_requests
echo 4096 >/sys/block/sde/queue/nr_requests
echo 4096 >/sys/block/sdf/queue/nr_requests
echo 4096 >/sys/block/sdg/queue/nr_requests
echo 4096 >/sys/block/sdh/queue/nr_requests
echo 4096 >/sys/block/sdi/queue/nr_requests
echo 4096 >/sys/block/sdj/queue/nr_requests

## **APPENDIX D: STORAGE CONFIGURATION CREATION**

### **Environment**

First, the CLI commands from the following command file are copied and pasted into the OCEANSTOR 6800 V5 CLI window. These commands are executed on one of the Host Systems.

- ***mk lun.txt***

Next, the following shell script is executed on one of the Host Systems.

- ***mkvolume.sh***

### **Step 1 - Create Disk Domains, Storage Pools, LUNs**

The ***mk lun.txt*** command file, listed below, includes all the CLI commands to perform the following actions:

- Create 14 disk domains
- Create 14 storage pools
- Create 56 LUNs

The command file described above is included in the Supporting Files (see Appendix A) and listed below.

#### ***mk lun.txt (part 1)***

```
create disk_domain name=dd01 disk_list=DAE000.0-11 tier0_hotspare_strategy=low
disk_domain_id=1

## **Step 2 - Create Mapping View, Host Group and Host**

The ***mk lun.txt*** command file, listed below, includes all the CLI commands to perform the following actions:

- Create 11 hosts
- Add the FC port's WWN to the 11 hosts
- Create a host group for the 11 hosts.
- Create one LUN group
- Add the 56 LUNs to the LUN group
- Create a mapping view

The command file described above is included in the Supporting Files (see Appendix A) and listed below.

### ***mk lun.txt (part 2)***

### **Step 3 - Create Volumes on the Master Host Systems**

The ***mkvolume.sh*** shell script, listed below, is invoked on the master Host Systems to perform the following actions:

- Create 56 physical volumes
- Create a volume group for the 56 physical volumes
- Create 18 Logical Volumes for ASU-1
- Create 18 Logical Volumes for ASU-2
- Create 2 Logical Volumes for ASU-3

The shell script described above is included in the Supporting Files (see Appendix A) and listed below.

#### ***mkvolume.sh***

## **APPENDIX E: CONFIGURATION INVENTORY**

An inventory of the Tested Storage Configuration was collected during the execution the script *full\_run.sh*. It generated the following log file:

- ***profile1\_volume.log*** List of configured volumes before the INIT Phase.
- ***profile1\_storage.log*** List of configured storage before the INIT Phase.
- ***Profile2\_volume.log*** List of configured volumes after TSC restart.
- ***Profile2\_storage.log*** List of configured storage after TSC restart.

The above log files are included in the Supporting Files (see Appendix A).

## APPENDIX F: WORKLOAD GENERATOR

The ASUs accessed by the SPC-1 workload generator, are defined using the script ***slave\_asu.asu***.

The phases of the benchmark are executed using the script ***full\_run.sh***. The script pauses at the end of the PERSIST\_1 test phase. Once the TSC has been restarted, the PERSIST\_2 test phase is executed by pressing ENTER from the console where the script has been invoked.

The above scripts are included in the Supporting Files (see Appendix A) and listed below.
